Prerequisites

In order to run the program the following software needs to be installed:

- Python ($\geq 3.6.x$)
- PDF-rendering program (Such as Adobe Acrobat)

And the following modules for python:

- PyQt5
- Pandas
- Matplotlib
- Numpy

Which can be installed with `pip install [name]`.

See: <https://pip.pypa.io/en/stable/installing/> if in doubt

Opening the program

Method 1:

Double-click the file

Method 2:

Windows:

Open cmd at file location (shift + right click) and type: python Main-GUI.py

```
E:\Dropbox\DTU\Programming\Repositories\Project-Electricity-GUI>python Main-GUI.py
```

Or

Open cmd and navigate to file location: cd (insert path) and type: python Main-GUI.py

```
E:\>cd \Dropbox\DTU\Programming\Repositories\Project-Electricity-GUI\
```

Mac OS:

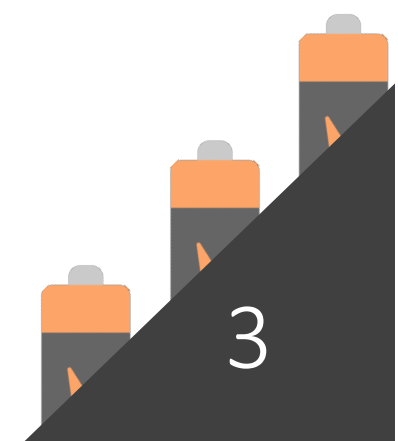

Open terminal at file location (shift + right click on folder) and type: Main-GUI.py

```
Project-Electricity-GUI — -bash — 80x24
Last login: Wed Dec  6 00:09:51 on ttys000
Simons-MacBook-2:Project-Electricity-GUI Simon$ python Main-GUI.py
```

Or

Open terminal and navigate to file location: cd (insert path) and type: python Main-GUI.py

```
Project-Electricity-GUI — -bash — 98x24
Last login: Tue Dec  5 23:31:09 on ttys000
Simons-MacBook-2:~ Simon$ cd Dropbox/DTU/Programming/Repositories/Project-Electricity-GUI/
Simons-MacBook-2:Project-Electricity-GUI Simon$ python Main-GUI.py
```

Loading data

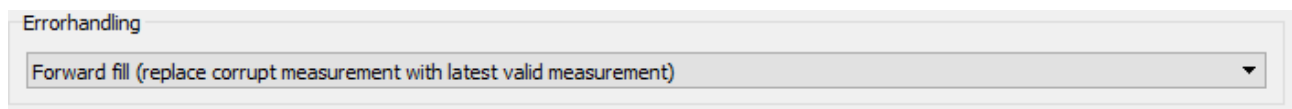

It is assumed that the user has a valid .csv file containing data about household electricity consumption with each column describing:

[year,month,day,hour,minute,second,zone1,zone2,zone3,zone4]

Where zone1 .. zone4 represents how many watt-hours are consumed at that time

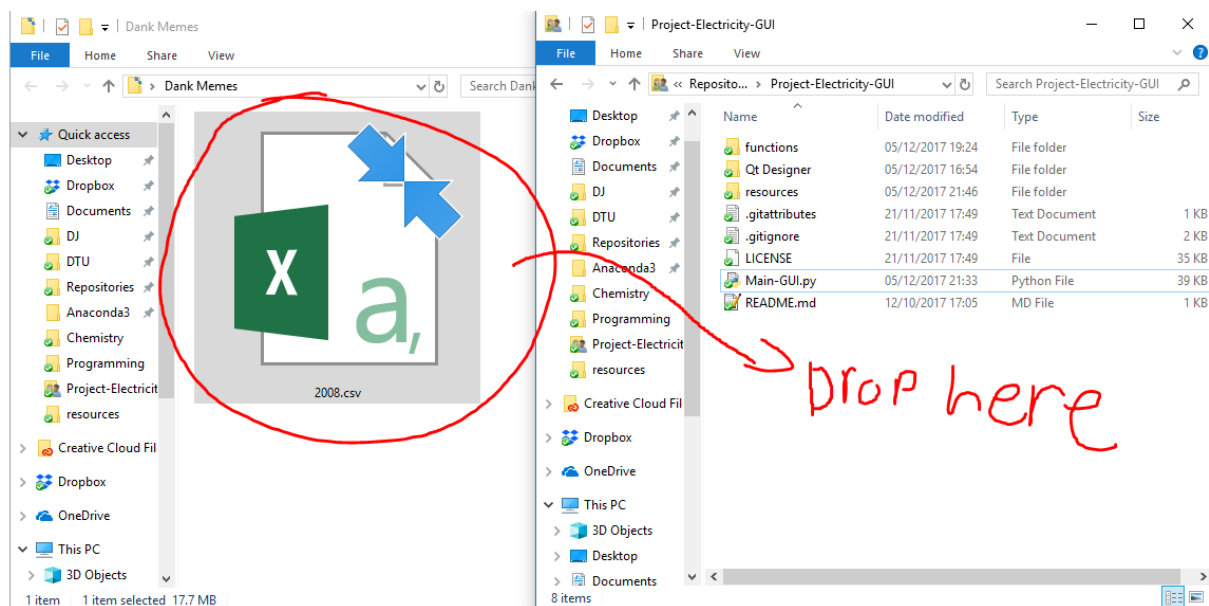

Define error handling type

Choose one of the 3 modes to handle errors in the data

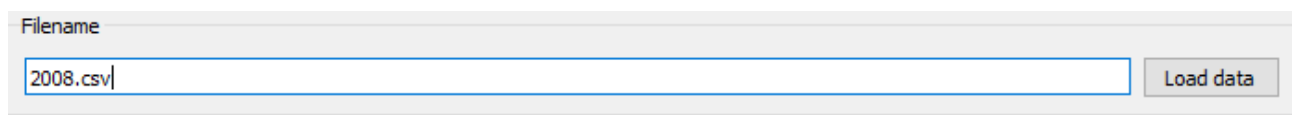

By filename

First drop the datafile into the SAME folder as Main-GUI.py

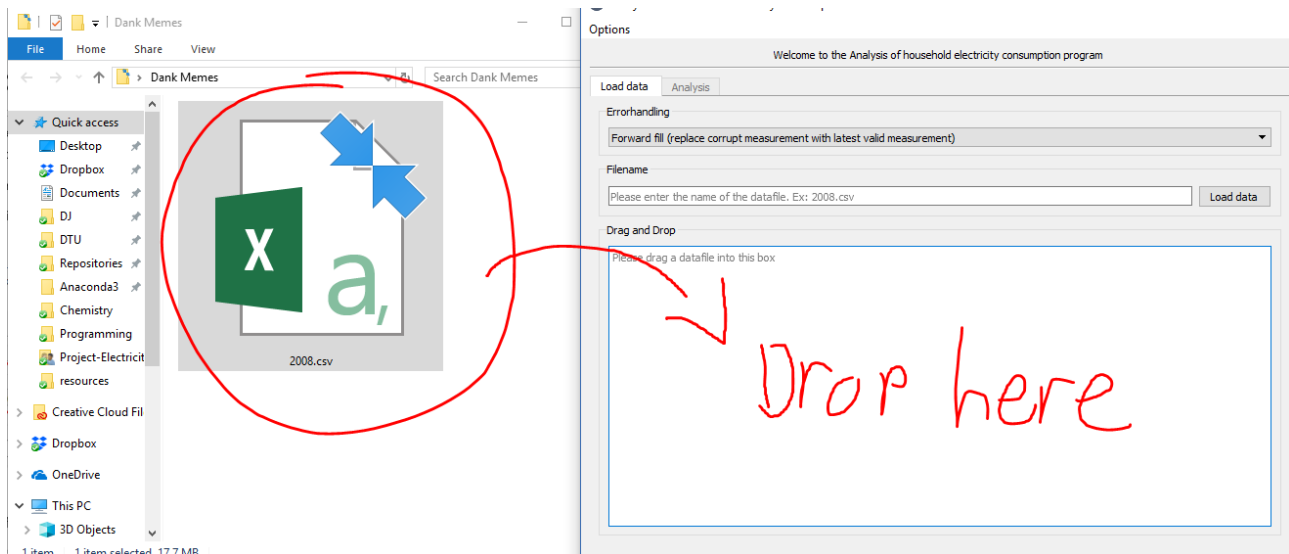

Then enter the filename, with its extension and hit ENTER or click “Load data”

By drag and drop

Drag the datafile into the Drag and drop box

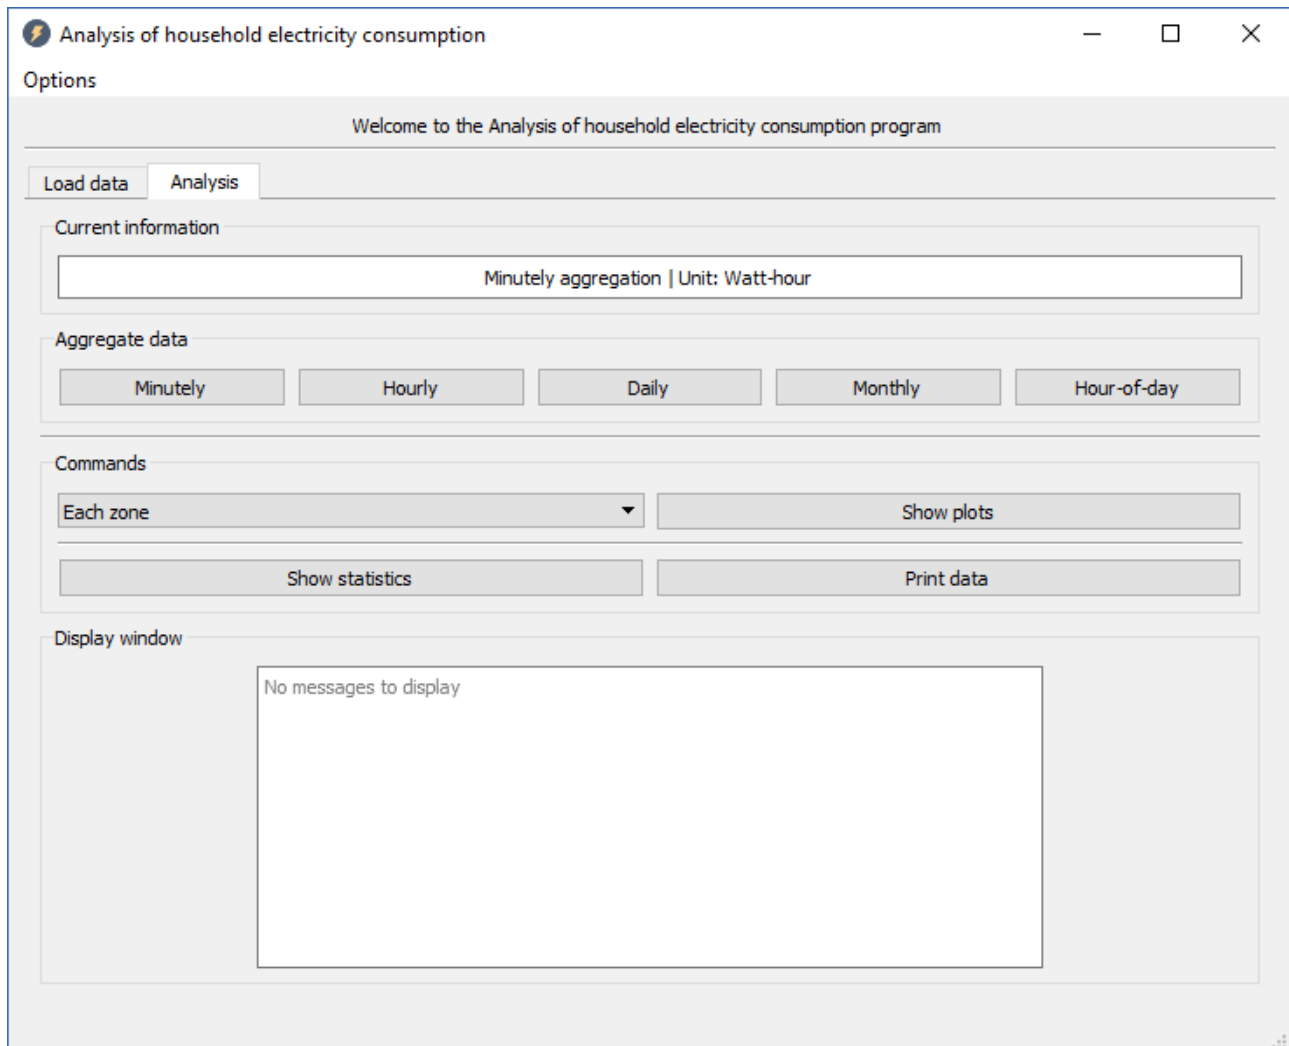

Important!

The program runs best when it is maximized or in full screen mode (press F11 on windows)

Analyze data

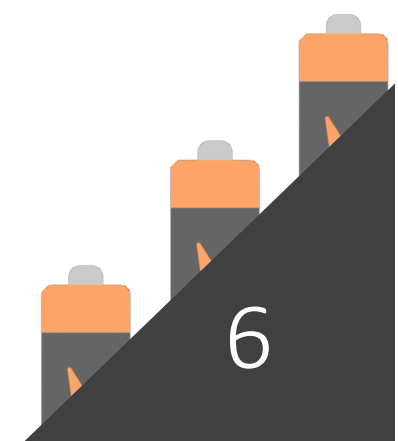

You will now see the following screen

Each element will be explained in the following section

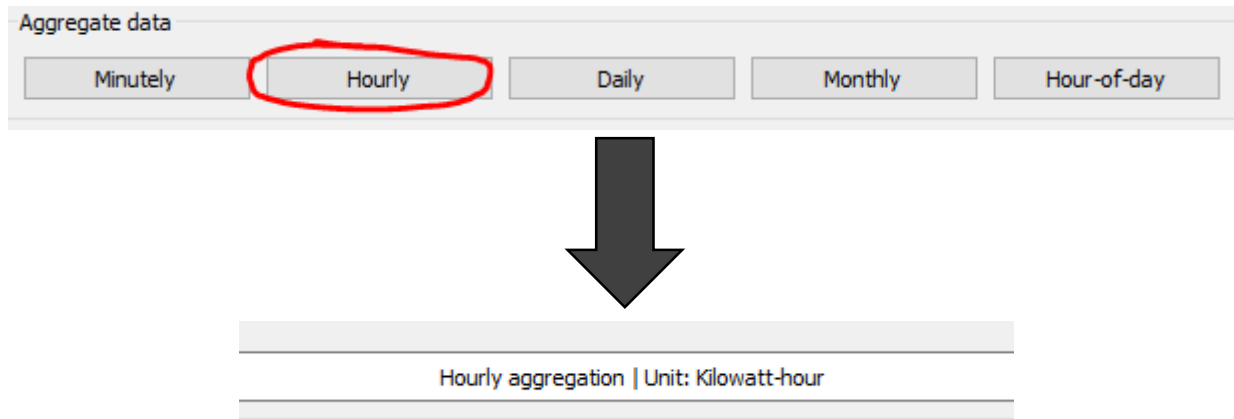

Current information

Displays the current aggregation and unit of power

Aggregate data

Will aggregate the data according to the button clicked. Hour-of-day represents the hourly average in the intervals [00:00-01:00[, [01:00-02:00[, ..., [23:00-00:00[.

Statistics

Click "Show statistics" to show the statistics of the current aggregate data. Adjust window size to see all statistics at once

The screenshot shows a control panel with two buttons: "Show statistics" (highlighted with a red circle) and "Print data". A large black arrow points down from this panel to a window titled "Commands" and "Display window".

The "Commands" section has a dropdown menu set to "Each zone" and two buttons: "Show plots" and "Print data". Below this is a "Display window" containing a table of statistics and a plot area.

	Min	25%	50%	75%	Max
Zone 1	0.0	0.0	0.0	0.0	80.0
Zone 2	0.0	0.0	0.0	1.0	76.0
Zone 3	0.0	0.0	1.0	17.0	31.0
Zone 4	1.3	5.0	9.4	25.3	172.5
All	1.3	5.0	10.4	43.3	359.5

To the right of the table is a plot area with the text "Showing statistics" and dashed lines indicating a plot area.

Click "Hide statistics" to hide the statistics window again

Plotting

Choose how to plot data (each or all zones) and click “Show plots”. It is suggested to make the window larger when plotting.

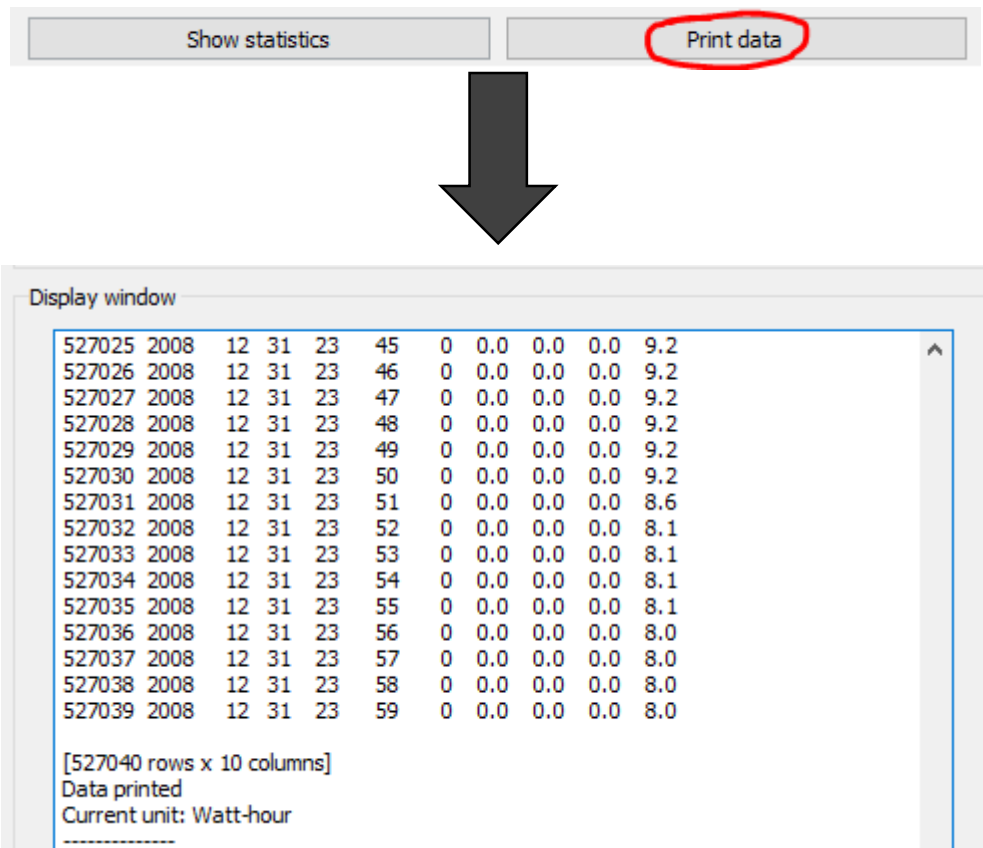

Click “Hide plots” to hide the plots. Larger plots, such as consumption per minute will make the program slower.

Print data

Press "Print data" to print the current data in its raw format

The screenshot shows a software interface with two buttons at the top: "Show statistics" and "Print data". The "Print data" button is circled in red. A large black arrow points from the "Print data" button to a "Display window". The "Display window" contains a table of data with 10 columns and 15 rows. Below the table, it says "[527040 rows x 10 columns]", "Data printed", and "Current unit: Watt-hour".

ID	Year	Month	Day	Hour	Value 1	Value 2	Value 3	Value 4	Value 5
527025	2008	12	31	23	45	0	0.0	0.0	9.2
527026	2008	12	31	23	46	0	0.0	0.0	9.2
527027	2008	12	31	23	47	0	0.0	0.0	9.2
527028	2008	12	31	23	48	0	0.0	0.0	9.2
527029	2008	12	31	23	49	0	0.0	0.0	9.2
527030	2008	12	31	23	50	0	0.0	0.0	9.2
527031	2008	12	31	23	51	0	0.0	0.0	8.6
527032	2008	12	31	23	52	0	0.0	0.0	8.1
527033	2008	12	31	23	53	0	0.0	0.0	8.1
527034	2008	12	31	23	54	0	0.0	0.0	8.1
527035	2008	12	31	23	55	0	0.0	0.0	8.1
527036	2008	12	31	23	56	0	0.0	0.0	8.0
527037	2008	12	31	23	57	0	0.0	0.0	8.0
527038	2008	12	31	23	58	0	0.0	0.0	8.0
527039	2008	12	31	23	59	0	0.0	0.0	8.0

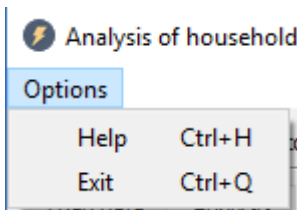

[527040 rows x 10 columns]
Data printed
Current unit: Watt-hour

Additional information

Tips!

Options

If you click the “Options” button you can see different actions which can be clicked or called by the corresponding shortcut

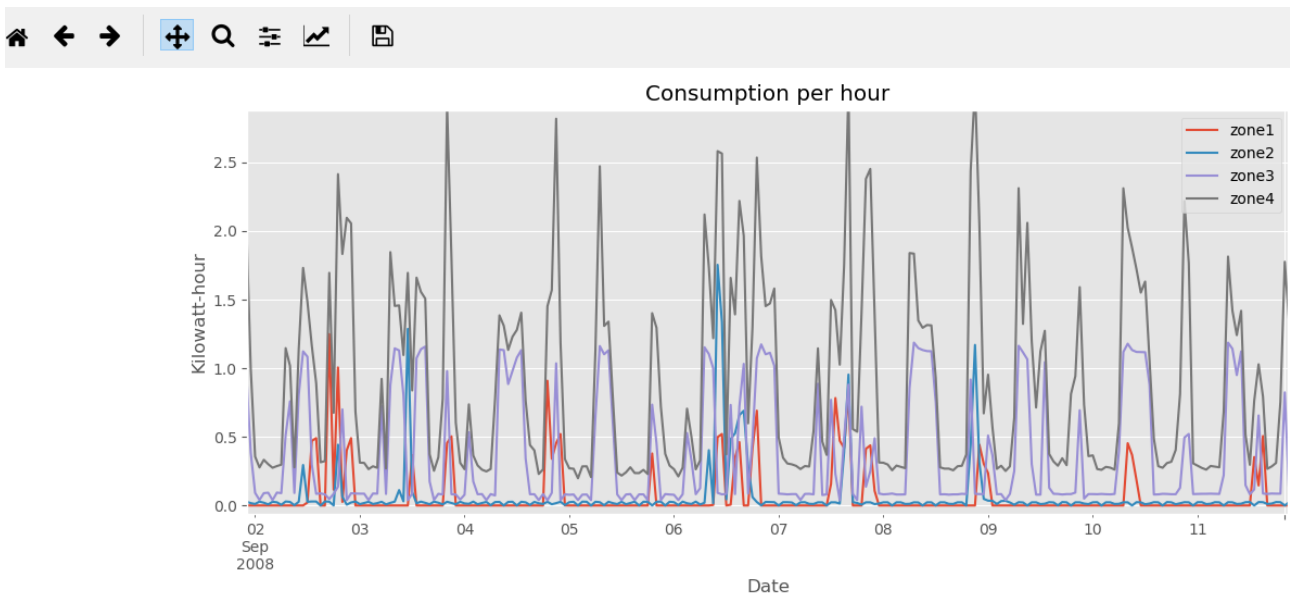

Help: Shows this file

Exit: Exits the program

Plotting

You can navigate through the plots by using the toolbar above the plots (Strongly recommended being in maximized mode when doing this)

For example you can zoom in to get
